

Business Requirements Document (BRD)

Project Title: BrandOS – Intelligent Branding System **Platform:** Built entirely on Vibe Coding **Owner:** [Your Name] **Version:** 1.0 **Last Updated:** [Date]

1. Project Overview

Description: BrandOS is a modular, AI-assisted SaaS platform that enables users (particularly designers, agencies, and startups) to create, manage, and export complete brand kits and brand guidelines. The system is fully built using Vibe Coding and designed to be scalable, intelligent, and adaptable for public sharing and multi-user collaboration.

Objectives: - Enable non-technical users to build brand systems effortlessly. - Centralize all brand assets in a smart editor. - Dynamically generate visual brand guidelines. - Offer structured exports (PDF, ZIP folders, etc.) - Allow AI-enhanced creative assistance. - Support agency-scale brand management.

Target Users: - Solo brand designers - Branding agencies - Startups and marketing teams - Creative directors

Unique Value Proposition: - Instant brand system generation - Modular, scalable, and AI-assisted - Smart contrast logic & color usage - Real-time brand preview and export - Built-in roles, permissions, and collaboration

2. Core Features

Feature Category	Features
User Management	Login / Signup, Authenticated Sessions, Multi-brand Dashboard
Brand Kit Editor	Logo (SVG), Fonts, Colors, Brand Info (Vision, Mission, Tone)
Guideline Builder	Dynamic Web-based Guideline, Per-section customization
Theme System	Title alignment, spacing, layout type, section styling
Color Logic Engine	Smart contrast validation, brand-based foreground/background logic
Brand Application	Business Card (PDF), Letterhead (Word), Mockups
Exports	PDF Brand Guidelines, Structured Asset ZIP Export
Public Showcase	Optional public share link or custom domain per brand
Collaboration	Multi-user collaboration per brand, role-based access
AI Assistance	Per-section AI suggestions (Vision, Messaging, Tone, etc.)
Plans & Pricing	Free, Pro, and Agency plans with gated features

3. User Roles & Permissions

BrandOS supports a collaborative environment with role-based permissions at the brand level. Roles are flexible and can be expanded in the future.

Role	Permissions
Owner	Full control over brand settings, assets, guidelines, exports, and team
Editor	Can modify brand assets and guideline content
Exporter	Can view and export assets and guidelines but cannot edit
Viewer	Read-only access to brand guidelines and public showcase

Roles are assigned per user per brand, allowing agencies to work across multiple brands with different teams.

4. User Journey / Workflow

1. User signs up or logs in.
 2. Creates a new brand or selects from existing ones.
 3. Enters brand assets (logo, fonts, colors, brand info).
 4. The system validates brand colors using contrast logic.
 5. Brand guideline is generated dynamically.
 6. User reviews and edits sections as needed (Vision, Logo, Colors, etc.).
 7. AI suggestions can assist with any editable section.
 8. User exports either the full guideline (PDF) or assets (ZIP).
 9. Optionally, user enables Public Showcase or connects a Custom Domain.
-

5. Data Model Overview (Vibe Collections)

Collection Name	Description
users	Registered users with auth credentials
brands	Brand profiles, each tied to one or more users
brand_assets	Logos, fonts, color palettes, and tone information
guideline_sections	Each section of the guideline, editable and styled
brand_permissions	Role assignments of users per brand
exports	Logs of exported files (PDF, ZIP)
plans	Pricing tiers and corresponding feature flags

Collection Name	Description
public_links	URLs for public showcases
custom_domains	Records for agency-branded domains
ai_prompts	AI prompt templates and user-generated suggestions
mockups	Branded mockups with pre-defined logo placement

6. Technical Architecture (Vibe-Compatible)

Frontend & Logic Platform: Vibe Coding (Full stack, no-code/low-code)

Architecture Model: Modular Monolith with isolated feature modules

Module Examples: - Auth Module - Brand Management Module - Asset Editor Module - Guideline Generator Module - Export Engine Module - AI Assistance Module - Collaboration/Permissions Module - Settings + Custom Domain Module

State Management: Scoped per feature using Vibe's local logic blocks, synced through collections

External Integrations: - OpenAI API (for AI suggestions) - Supabase or Cloudinary (for storage) - JSZip + html2canvas + jsPDF (for file exports)

Routing & Views: Based on Vibe Pages: - `/login`, `/dashboard`, `/brand/:id/editor`, `/brand/:id/guideline`, `/brand/:id/export`

Design System: - Reusable UI blocks - Slide-style structure with consistent spacing and typography - Adaptive theming based on brand color palette

7. Business Rules

- Only authenticated users can access brand editing features.
- Each user has specific permissions per brand.
- Guideline layout, style, and section content reflect brand data in real-time.
- Each brand must define a primary color palette (1-3 colors max).
- Smart contrast system automatically adjusts background/text color based on WCAG.
- Brand exports (PDF/ZIP) follow structured templates with optional variations.
- Brand guideline editing is restricted based on roles and plan.
- Public showcasing is opt-in and disabled by default.
- Custom domains are available only to Agency plans.
- AI suggestions are triggered manually per section and depend on plan.

8. Pricing & Feature Access

Plan	Brands Allowed	Roles	Public Showcase	AI Suggestions	Exports	Custom Domain
Free	1	Owner only	✗	Limited	PDF only	✗
Pro	Up to 5	Owner + Editor	✓	✓	PDF + ZIP	✗
Agency	Unlimited	Full Team Support	✓	✓	Full	✓

Feature access is enforced via collection-level flags and page-level visibility rules.

9. Future Features & Scalability

- Templates Marketplace (for business cards, social kits, etc.)
- Brand Performance Dashboard (analytics, brand consistency tracking)
- Team Chat & Commenting per section
- Activity log & edit history
- External API Access (for integrations with other tools)
- Plugin system (enable custom features per agency)
- AI-powered layout suggestions
- Advanced animation & motion brand previews

10. Appendix & References

- Export folder structure reference
- Color contrast validation rules (WCAG 2.1 AA)
- AI prompt examples
- Vibe Coding module structure reference
- Sample brand use cases
