

Brand Brief: VECTOR

Project: Brand Identity & System Positioning

1. Brand Overview – What is VECTOR?

The Elevator Pitch: VECTOR is a directional job-search system that transforms chaotic job hunting into a structured evaluation process using AI scoring and optional human support.

The "How": It functions as a "control layer" between job discovery and execution, generating "Job Scans" with transparent logic.

The Distinction: VECTOR is not a job board, recruiter, or simple automation tool; it is a decision framework for job seekers.

2. Vision and Mission

Vision: To define a new trajectory of job-seeking that moves the industry from volume-based "spray and pray" to high-relevance precision.

Mission: To provide job seekers clarity and direction by replacing unguided applications with a logical, transparent evaluation process—using Job Vectors, Job Scans, clear accept/reject logic, and optional, targeted human support.

3. Strategic Brand Positioning

The Intersection: The brand sits at the intersection of AI-driven data analysis and human expert guidance.

The Trade-off: VECTOR emphasizes Precision over Volume, and Transparent Logic over Black-box matching.

4. Core Visual Concept – The Vector (Direction + Magnitude)

The Object/Idea: The mathematical "Vector" (an arrow representing specific direction and strength).

Why: It represents the shift from "chaos" to "structure"

Design Instruction: The logo should represent the "Job Vector"—a clear path or trajectory—rather than a generic search icon.

5. Brand Personality & Tone

Keywords: Structured, logical, transparent, and surgical.

The Vibe: The brand should feel like a high-performance flight deck or an executive dashboard—calm and in control despite the "noise" of the market.

6. Color Direction – "Logic Blue & Signal Teal"

Primary Vibe: Professional and deep contrasted with bright, high-visibility colors.

Avoid: Cluttered or "friendly" pastel palettes that look like traditional social-media job boards.

7. Typography Direction

Style: Clean, technical Sans-Serif.

Function: Optimized for dense information environments such as dashboards where users review AI scoring and "Job Scans".

8. Logo Usage Requirements

Placement:

- Digital product interfaces.
- website landing pages.
- pitch and proposal materials.
- icons, favicons, and app tiles.
- exported reports and visual summaries.

Technical Needs: Must remain sharp and legible as a small icon within a browser tab or dashboard sidebar.

9. Immediate Scope of Work

- Primary Brand Identity.
- Product UI Kit.
- -
- -

10. Closing Note

The Guardrail: VECTOR is a System for Control, not just another career site.

Final Feeling: Moving the candidate from a state of overwhelm to a state of precision control.
